IMPROVING MENTAL HEALTH OF AFGHAN YOUTH

The unique mHealth and Telemedicine based mental health program in Afghanistan has proven to be highly successful in reducing stigma, improving mental health screening and diagnosis, and building capacity of health providers. The program was implemented by Tech4Life Enterprises, Aga Khan Health Services, University of Calgary and the Ministry of Public Health, Afghanistan. Recent external evaluation showed that the intervention was able to reach communities and health providers in the remotest parts of Afghanistan, and improve mental health information and services. The final evaluation report of this project was submitted by the Tech4Life team to the Ministry of Mental Health, Afghanistan. The project has been funded by Grand Challenges Canada. All the partners are now working together to scale the program to other parts of Afghanistan. The Aga Khan Health Services Afghanistan also obtained a 10 User License of the complete mobile & web based telemedicine software ‘MDConsults’ which plays an integral part in the Mental Health Project. Tech4Life Enterprises will continue supporting the expansion of this initiative to other provinces of Afghanistan.

TECH4LIFE ENTERPRISES RECEIVES OVERWHELMING RESPONSE AT MEDEdge SUMMIT 2016

With the aim to provide access to healthcare for all, Tech4Life displayed its game changing technologies at the MedEdge summit in Richmond Hill, ON on June 14th, 2016. The company received remarkable response from the visitors. Our flagship product ‘MDConsults’ and the next generation ‘digital stethoscope’ were highly appreciated by the healthcare practitioners and decision makers. These solutions enhance telemedicine experience and improve diagnosis and care in remote locations.
FRIENDS HOSPITAL ISLAMABAD AND TECH4LIFE IMPLEMENT TELEMEDICINE FOR BETTER ACCESS TO HEALTHCARE

Tech4Life Enterprises is proud to announce yet another implementation of its fastest growing telemedicine solution ‘MDConsults’ in Pakistan. We have recently deployed our integrated telemedicine platform ‘MDConsults’ at Friends Hospital, Islamabad Pakistan. Friends Hospital is constructed with the idea to provide very low cost but high quality treatment and diagnostic facility to poor and needy patients. Friends Hospital is now expanding its services through deploying MDConsults along with the next generation point of care devices. This initiative will enhance access to healthcare for their distant communities, and improve quality of services. Tech4Life and Friends Hospital have also agreed upon further expanding it to their other health facilities to broaden their network and reach the masses.

ANOTHER REMARKABLE ACHIEVEMENT OF TECH4LIFE ENTERPRISES

Tech4Life Enterprises has been awarded as ‘TrailBlazer Company of the year’ at VentureLab AGM in Toronto on June 23rd, 2016. Being an information and communication technology provider and leading the world’s fastest growing mobile telemedicine application ‘MDConsults’, Tech4Life Enterprises has proven itself as game-changers in the field of telemedicine and point of care devices.
